

TG9990 Echo Test Function

TG9990 Echo Test Function

On DMR there is an Echo Test function available by way of TG9990 where you can transmit on TG9990 on Slot 2 and after you unkey the PTT the system will play back your last transmission to allow you to test the quality of your audio/signal into the repeater.

One important setting on the Motorola CPS is to ensure the [Enhanced Channel Access] option is unticked.
